

Assignment_3_DANA_4800

2024-02-04

#Task 1

#To import the file.

```
Puebla23 = read.csv(file.choose(),header = T)
```

#to convert the month column into a categorical with custom levels.

```
Puebla23$Month = factor(Puebla23$Month, levels = c("Feb", "Mar", "Apr", "May", "Jun", "Jul", "Aug", "Sep", "Oct", "Nov", "Dec"))
```

#now we convert other variables into categorical

```
Puebla23$Year = factor(Puebla23$Year)
```

```
Puebla23$Weaather_main = factor(Puebla23$Weaather_main)
```

```
Puebla23$Weather_Description = factor(Puebla23$Weather_Description)
```

```
Puebla23$Weather_icon = factor(Puebla23$Weather_icon)
```

#to get summary of our dataset

```
summary(Puebla23)
```

```

After importing our dataset, we are having 8785 observations with 22 columns. We are categorizing 'Month' variable into customs levels so that we will have sorted months in our graph. We are also converting 'Weather main', 'Weather Description' and 'Weather Icon' variables to categorical as they only have 3, 9 and 10 categories/levels respectively.

Looking at the summary of our data, we can see different ranges of our continuous variables (i.e. 'Temp' 'Feels like', 'Temp Min', 'Temp Max', 'Pressure', 'Humidity', 'Wind Speed', 'Wind degree', 'Wind Gust', 'Clouds'). However, some of the variables have almost all of the values similar, this is confirmed by using the sum() function above which shows that 'Temp', 'Temp Min' and 'Temp Max' have only 3 out of 8785 observations different from each other while as 'Wind speed' and 'Wind Gust' have all 8785 similar observations.

```
#Task 2
```

```
#To plot monthly graphs of different variables.
```

```
boxplot(Puebla23$Temp ~ Puebla23$Month, main = "Boxplot of Temp vs Months", ylim = c(0,35), xlab = "Mon
```

Boxplot of Temp vs Months

```
boxplot(Puebla23$Feels_like ~ Puebla23$Month, main = "Boxplot of Feel like Temp vs Months", ylim = c(0,35))

```

```
plot(Puebla23$Pressure, Puebla23$Humidity, main = "Scatterplot of Pressure vs Humidity", xlab = "Atmospheric Pressure")
```

Scatterplot of Pressure vs Humidity

```
## integer(0)
```

We are first plotting boxplot to see monthly trends and patterns of our continuous variables. Then we are using barplot to find the frequency of hours for different weather types and percentage of clouds with respect to different weather conditions. Finally we are plotting scatterplots between different continuous variables, which have strong correlation, to find relationship between them.

```
#Task3
#to find missing values
colSums(is.na(Puebla23))
```

```
##           DT           Datetime           Month           Year
##           0             0             0             0
##      Timezone      City_Name      Latitude      Longitude
##           0             0             0             0
##           Temp      Feels_like      Temp_Min      Temp_Max
##           0             0             0             0
##      Pressure      Humidity      Wind_Speed      Wind_Deg
##           0             0             0             0
##      Wind_Gust      Clouds_all      Weather_Id      Weaather_main
##           0             0             0             0
## Weather_Description      Weather_icon
##           0             0
```

By using colSums() function we can see that we don't have any missing values in any variables of our dataset therefore, nothing needs to be fixed.

```

#Task4
#Outliers
#Refer to the previous montly boxplots

#summary of each month
summary(Puebla23[Puebla23$Month == "Feb",])

```

```

By looking at the boxplots of our monthly data we can see many outliers for different numerical variables. We can find the number of outliers by using the formula for calculating outliers. After getting the LL and UL we substitute the values in the sum() function to get the number of outliers in a variable.

```
#Task5
```

```
#to get mean and medians to put inside our histogram
mean_temp = mean(Puebla23$Temp)
median_temp = median(Puebla23$Temp)
```

```
mean_feel_temp = mean(Puebla23$Feels_like)
median_feel_temp = median(Puebla23$Feels_like)
```

```

```

Histogram of Clouds

Using the `hist()` function on various continuous variables of our dataset, we can see the shape and spread of histograms of these variables.
